12th Edition

JACKSON, MICHIGAN

Nurseries Located at "Primrose Wood" Three Miles North on M 50

E SPECIALIZE on the desirable new and rare varieties of Hardy Plants and Alpines, as they make their appearance abroad or in this country.

We have listed many extremely rare plants in this edition, and still have many more under observation which will be offered to the garden lovers as soon as they become acclimated to American conditions and prove themselves worthy subjects.

We hope you will appreciate our efforts to give garden lovers the best obtainable; often secured from private sources, where years of patient toil and care have rewarded the grower.

Our plants are strong, vigorous stock, and, grown in our trying climate, we can assure their hardiness anywhere.

We are always glad to give all the assistance possible to our patrons, by giving them any information desired as to the especial requirements of any plant.

Our stock is all field-grown, insuring the strongest, healthiest constitution possible. This is the forerunner of certain success when transplanted to your garden. We do not advocate pot-grown plants for anything but the greenhouse.

We use the utmost care in shipping stock. Plants and shrubs are not dug and then left around to dry out; but each order is dug separately, put into receptacles filled with wet sphagnum moss, and brought immediately to the shipping room. Each plant is then wrapped in wet moss and oiled paper, that they may keep fresh from the start to the finish of their journey.

All of this is expensive; but it insures to the customer plants that are in good condition when received.

We would like to call attention to the fact that ALL plants require a thorough preparation of the soil if they are to thrive and make a vigorous growth.

Keep the surface of the soil loose by frequent stirring. If watering is done, water at least an hour in one place (using a fine spray) and then do not sprinkle there again for a week. Frequent

watering is worse than none at all as it induces the roots to come to the surface instead of striking down deep as they should.

WE MAKE ALL SHIPMENTS BY EXPRESS, CUSTOMERS TO PAY CHARGES, UNLESS OTHERWISE REQUESTED. If desiring shipment by PARCEL POST, add 10% extra for points west of the Mississippi.

THIS LIST NULLIFIES ALL PREVIOUS LISTS.

TERMS

Cash with order, unless it is desired to open an account with us. In that case, please send financial references.

No account opened for less than an initial order of \$10.00.

Not less than three plants of the same variety supplied at the dozen rate.

Attention

To encourage the use of plants in larger quantities and to discourage the planting of one plant of a variety, we have raised the price of a single plant, but have also offered three plants of a variety at the dozen rate, instead of six, as formerly.

We trust our customers will agree with us, that the practice of planting one plant of a variety is most undesirable from every standpoint.

Alpine Gardens

To MANY the idea of a Rock Garden seems to be an exposition of stone. The real object of a Rock Garden is to enable one to grow in their own gardens the natives of the high mountains, where snows are deep and summers very short. To be sure, all plants grown in the rockery are not natives of the Alpine regions; but the great majority are, and while the beginner is apt to feel that this is a most difficult branch of gardening, it is only necessary to begin with the many easy subjects to find it not only comparatively simple but immensely fascinating as well, and a branch that opens up entirely new delights in gardening.

An Alpine garden should be an artistic expression of rock formation, conveying the idea of a drift or out-cropping of strata rock. Not uniform or regular but rather bold and so placed as to form a harmonious picture from all approaches.

The framing of this picture, or the background, should express the note of irregularity by varying heights, groupings and staging of trees and shrubs so they will co-ordinate with the feeling conveyed by the middle-ground.

The foreground, or detail, expressed in the vivid colors and association of dwarf conifers and shrubs, should be carefully considered. Harmony is attained when colors nearly related lead on from one to another, or are grouped together. But even contrasts become harmonious when they are perfectly true.

It is obvious, therefore, that the designer must know his subjects thoroughly; their time of bloom, color, type of foliage and form. Form and light should be the governing thought throughout the entire garden.

It is the popular belief that the building of an Alpine Garden is the easiest form of landscape work; whereas, it is decidedly the most difficult.

It may be of assistance if we give a few suggestions as to the construction of a Rock Garden. First of all, the drainage must be perfect, for no Alpine plant will survive a stagnant condition of the soil. If underground moisture can be supplied by means of minutely perforated pipe so much the better. This is to supply, in a small way, the melting snows, to which all Alpines are accustomed, and should be so arranged that the water can be turned off and on at will.

Contrary to common impression, Alpines require something besides ashes and tin cans upon which to grow. While they **do** require a very **stony** soil, they need **good soil** mixed with the stones; more or less, according to the subjects being planted.

We have found that a soil mixture consisting of one-half peat, one-fourth leaf mould and one-fourth clay loam is well adapted to the successful growth of nearly all Alpines.

All Alpines are deep rooting. This fact should never be forgotten and when building rockery, wall or bank, ample depth should be provided. It is a deep, cool root run, under the stones, that is required for success.

Next in importance, is a thorough ramming of the soil, to preclude the possibility of any air spaces. This one mistake is the cause of more failures in planting, IN ANY KIND OF A GARDEN, than any other one thing. THE SOIL CANNOT BE PACKED TOO TIGHT AROUND THE ROOTS. But in addition, THE SOIL MUST BE LOOSE ON TOP, that the rain may easily penetrate it, that the roots may breathe, and that there may be a mulch to keep the roots cool and moist.

Alpine plants need to be planted in masses of one kind to obtain good color effects. This applies to all garden planting, but to Alpines most of all, as they are so small.

A list of plants for special places will be found in the back of the catalog.

Landscape Department

We are prepared to design and execute Alpine Gardens, Herbaceous Borders, Naturalistic Rock Work, and the complete development of both large and small estates.

Being growers, we have the advantage of knowing the exact requirements of the different plants. This knowledge is absolutely essential to the attainment of best results in landscape composition.

Good staging of deciduous trees and evergreens, as well as Alpines and border plants, requires knowledge gained only through constant association with them during their growth and blooming periods. Opportunity is also afforded to study beautiful combinations not generally known.

Our men are skilled in planting, our prices are moderate, and we guarantee our work to give excellent results.

Our Mr. H. W. or H. C. Wolcott are ready at all times to advise prospective clients, for which service we make a nominal charge to cover traveling expenses and actual time consumed.

Alpine Plants

ACAENA (New Zealand Bur). Alpine plants belonging to the Rose family. Inconspicuous blossoms but having beautiful foliage. All the varieties are most useful for carpeting and thrive in almost any situation. Each Doz. A. Buchanani. Prostrate with pale gray leaves. The flower heads have yellow bristles\$0.50 \$3.50 A. caesia glauca. Beautiful carpeting plants with roselike for liage of soft grey blue50 3.50 A. microphylla. Charming foliage from rosy bronze to grey-blue. Studded with little round balls of bloom, like a crimson hedge-hog50 3.50 A. novae-zealandiae. Stout, woody stock, creeping and silky foliage. Flower heads large and purplish50 3.50 A. sanguisorbae. Less silky than the other varieties. Heads of bloom smaller, reddish purple50 3.50 ACHILLEA (Milfoil or Yarrow). Well known rock plant, suitable for dry and sunny places. Doz. A. ageratifolia. Tufted growth with silvery leaves and white flowers. Blooms in May and June. Fine for rockery. 3 in. ..\$0.75 \$5.00 A. Clavennae. Compact tufts of silver foliage with a profusion of white flowers from July to September. Rockery 5.00 A. tomentosa. Lovely silky foliage. Dwarf, compact habit. Brilliant yellow heads of bloom\$0.75 \$5.00 ACONITUM (Monkshood). Aconitums are very stately and beautiful plants for the hardy border. Exceedingly valuable on account of their late bloom as well as for planting in shade, as they will flourish even under trees. Thrive best in very rich soil and prefer not to be disturbed when once established. Each Doz. A. Fischeri. Semi-dwarf variety with large, pale blue flowers. Commences to bloom \$3.50 A. Sparks' Variety. Very dark blue. Blooms 3.50 early50 A. Wilsoni. Very handsome variety, introduced from China by Mr. Wilson. Large,

Aconitum Fischeri.

Anemone Pulsatilla.

	Each	Doz.
ANEMONE baldensis. A true Alpine Anemone. Prefers stony soil and perfect drainage. Large, single white blos-		
soms, with golden center, on stems of 5 or 6 inches	0.75	\$7.50
A. Halleri. Lovely rich violet blossoms, all silky outside. Very choice	.75	5.00
A. narcissiflora. Exquisite Alpine with silky foliage and deli-		
cate pink and white flowers, like an apple blossom	.75	5.00
A. patens. Allied to the Pulsatillas. Large blossoms in varying shades of violet	.50	3.50
A. pulsatilla (Pasque Flower). A fine plant for either rockery or border. Lovely violet cups filled with golden stamens.		
Well drained position in full sun. April-May	.35	2.50
A. pulsatilla rubra. A variety with blossoms of deep, violet-red.	.35	3.00
A. rivularis. A gem for a cool, moist position. Lovely white	75	7.50
blossoms, with blue reverse, in summer. Very choice A. rupicola. Lovely white blossoms, silky outside, on stems 10	.75	7.50
to 12 inches high	.50	3.50
A. sylvestris. Fine for cool, moist corner of rock garden or bor-		
der. Large, white blossoms on nodding stems of about 12 inches. Very free blooming. May June	.35	3.00
A. vernalis (Lady-of-the-Snow). A rare and exquisite Alpine.		
Large, open flowers of pure white, flushed violet outside. Blooms very early. Easily grown in rich vegetable soil in		
full sun. Very choice	.75	5.00
ANTENNARIA (Cat's Ears).	Each	Doz.
A. dioica. Masses of silvery grey rosettes with heads of white		
blossoms on stems of 2 or 3 inches. May	0.50 75	\$3.50 5.00
	•/)	J.00
	Each	Doz.
A. montana carminea. Somewhat shrubby plant about one foot high with silky foliage and dense heads of red blossoms. Very		
easy culture and much prized for the rock garden. Much		
improved form of the type		\$5.00
ANTIRRHINUM (Snapdragon). The ordinary Snapdragon coarse growth to be admitted to the rock garden, but the	s are	of too
three species that are very charming for the rockery. A dr	y, sun	ny spot
and well drained soil are essential to success.	Each	Doz.
A. Asarina. A trailing plant from the south of France with very		
attractive foliage and creamy white flowers. June	50.50	\$3.50
grey-green foliage. Abundance of yellow and white flowers.	.50	3.50
A. sempervirens. A beautiful trailing plant for the rock garden.		
Flowers white with purple blotch. June-July	.50	3.50

	GIA (Columbine). The Aquilegias need no praise; they appeal to
	ne by their grace and the beauty of their flowers, the colors of the
new hy	brids being particularly handsome. All the Columbines may be used
	rockery, but it is better to leave the larger species and their varieties
	border, although some of them are very attractive, when perched on
some h	igh spot. They thrive in shade or sun, but prefer a rich, well drained
soil in	partially shaded position. If not allowed to go to seed and not
covere	d too heavily in winter, they will flourish for years and will not
change	their colors. Coal ashes put around the crown in the fall will help
to prev	vent their decay.
-	·

		Each	Doz.
	alpina. A charming species from Switzerland and best suited		
	to the rockery. Beautiful blue and white flowers. True va-		
	riety very rare	\$0.75	\$5.00
A. c	caerulea. True. Lovely white and blue flowers	.35	2.50
A. c	caerulea, Mrs. Nicholls. A fine novelty. The flowers are		٠,

DOM:
A. Ceres. Early flowering. Rosy lilac. 2½ to 3 feet\$0.60 \$4.00 A. Crepuscle. Blush pink
A. Davidi. One of the best of the large Astilbes and particu-
larly fine in boggy places, producing graceful plumes of rich crimson purple with violet anthers. 4 to 5 feet
A. Etna. Beautiful rose-pink blossoms
A. Feerie. Flesh white in large panicles. 2 feet
A. Gloria. Brilliant, deep pink blossoms. Exceptionally fine 1.00 6.00
A. grandis. A fine species, growing five to six feet tall and bearing immense panicles of white flowers
A. rubens. A recent introduction of great beauty, producing large panicles of the deepest rose color
A. Queen Alexandra. Dwarf variety with light pink flowers60 4.00
A. Salland. Very vigorous variety with bronzy red stems and distinct red blossoms

Each Doz.
ASTILBE vesta. Lovely salmon-pink\$0.60 \$4.00
A. simplicifolia. Beautiful dwarf variety from Japan. Panicles
of white blossoms and attractive foliage. A gem for the
Alpine garden. 9 inches
ASTRAGALUS (Pea Flowers). A large family of plants belonging to the legumes. A few are of outstanding beauty. They require stony soil and
full sun. They bloom in late summer, making them doubly valuable in the
rock garden. Each Doz.
A. danicus. Pealike foliage and purple blossoms from June to
September. 4 inches high\$0.50 \$3.50
A. monspessulanus. Considered one of the jewels of the
family. Forms tufts of fernlike foliage. Loose spikes of
wine red flowers on dwarf stems in July
A. onobrychis. Makes lax tufts, some 18 inches across. Large
purplish blue flowers in heads of bloom 18 inches high. July
AUBRIETIA (Wall Cress). The rock garden could ill afford to do without its wonderful masses of Aubrietia that give such a display of color during
April and May and which are among the most easily grown and the most
showy of all rock plants. They form spreading tufts and are seen at their
best on some mound of soil or where they can fall from the top of a rock-
ery wall. A light, loamy soil meets their requirements and after the flowers
are over the plants should be cut back well, that the tufts may not become bare in the center. We offer the best of the new named varieties.
Each Doz.
A. Bridesmaid. Pale rosy blush\$5.50 \$5.00

ing one of the most attractive features of the spring garden. They perfectly hardy in our Michigan climate and once established are as stu as our oaks. The different varieties range in size from one inch to the feet, and in time of blooming, from early April until late summer. Do try to compel Primroses to grow in hot, sandy places for you will only me with failure. They need at least partial shade and while they enjoy me ture at the roots, they must have good drainage or they will rot at crown. Also be particular when planting that no dirt is left on the crown as it seems to smother them. We have found hard coal cinders excell for drainage. In fact, the majority of rock plants seem to like a cinders mixed with the soil.	ardy nree not neet nois- the wn, lent few
P. auricula alpina. One of the treasures of the rock garden. The growth is very attractive, forming rosettes of thick leaves, sometimes farinose or mealy. From these rosettes the flower stalks rise to a height of 6 or 8 inches, bearing heads of bloom of various colors and exceedingly fragrant. Their native home is in the rocks, where they are constantly supplied with moisture at their roots. Give them a mixture of peat, leaf mould, and sandy loam, with plenty of stones mixed. Our strain is from the great Primula specialist in Scotland and comprises a wide range of beautiful colors and)oz.
P. anisodora. Habit of P. japonica. Flowers in whorls of	5.00

Choice Dwarf Evergreens —Suitable for the Alpine Garden

In the planting of Alpine Gardens, the fact should always be kept in mind

that Evergreens are a most important part of the garden scheme.

The very name of Alpine Garden suggests the high altitude of the snowy Alps with the deep gorges and ravines clothed in the warm, fragrant, ever beautiful Pines.

It is, of course, impossible to use the same varieties of large Evergreens in the man-made garden of infinitely smaller proportions. However, the dwarf types of conifers readily lend themselves to the smaller scale of their surroundings and are at home among the rocks, where they are vitally essential in producing the effect of distance and depth, so necessary in making a naturalistic picture.

These Evergreens are all thrifty stock and heavily rooted and have been several times transplanted. They are all splendidly balled and burlapped, the work being done by our own experts.

B&B indicates Balled & Burlapped. Each X indicates one transplanting.

JUNIPERUS (Juniper). A large family of evergreens comprising some of the most beautiful as well as useful types. Nearly all are suitable for the rock garden.
